

RIDX™ Toxoplasma Ab Test Kit

Toxoplasmosis is caused by *Toxoplasma gondii*, a protozoan parasite that infects warm-blooded animals. Felines are the only definitive hosts of the parasite. Infected cats can transmit the disease to humans and other animals.

The RIDX™ Toxoplasma Ab Test Kit is a diagnostic reagent that can quickly and easily detect *Toxoplasma* antibodies in feline serum, plasma or whole blood 10 minutes after dropping the sample.

Principal: Chromatographic immunoassay for the qualitative test
Specimen: Feline blood (whole blood, serum, plasma)

Components

- Toxoplasma Ab test device (10 tests)
- Dilution buffer (1 vial)
- Disposable capillary tube (10 ea)
- Anti-coagulant tube (with EDTA, 10 ea)

Features

Sensitivity 95.5% (21/22) vs. IFA

Specificity 95.2% (139/146) vs. IFA

No Cross-reactivity with five feline pathogens (FCV, FCoV, FHV, FeLV, and FPLV)

Test Procedure

- Collect the whole blood sample and put it into the anti-coagulant tube (approximately 1 ml).

If you use whole blood
- Close the cap on the tube and invert it 5 times to mix the sample with EDTA.

5 times
- Take 10ul of the sample (whole blood, serum or plasma) using a capillary tube unto the blue line on the capillary tube.

10ul
- Add 10ul of the sample into the sample hole on the device.

10ul
- Add 4 drops of the dilution buffer into the sample hole on the device.

4 drops
- Read the result at 10 minutes.
